Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "comprises" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Reinhold

Reinhold discloses a micro focus X-ray device with features of the claimed invention including a chamber with a window for X-ray radiation output with an electron emitter and a transparent anode (element 17), positioned before a focus of least one focusing lens (element 21), and a device for shaping the X-ray radiation (element 23), which can be a diaphragm with its center placed at the focusing of the electron beam (see the abstract and figure 1).

Regarding claim 3, the anode is tightly vacuumed and positioned inside the window

Regarding claims 5-6 the electron lens has related focuses.

Regarding claim 7, Reinhold teaches the use of pulsed operation (see, the abstract).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2855

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Reinhold.

Reinhold does not elaborate on the material of the anode. The utilization of an specific material does not directly contribute to the apparatus claim, however, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use any suitable material for the anode, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshine*, 125 USPQ 416.

5. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Reinhold in view of Anderson.

Reinhold does not specifically recite the use of a cooling system. The use of cooling means to cool down the anode in a hot environment is, however, notoriously known. Anderson, for example is presented to show such arrangement (col. 5, line 60). It would have been obvious, therefore, to one having ordinary skill in the art at the time the invention was made to modify Reinhold to provide for a cooling means in order to protect the anode for potential temperature related damage.

Art Unit: 2855

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Max H. Noori whose telephone number is (703) 308-5248. The examiner can normally be reached on Monday-Friday from 8:00 AM to 5:30 PM.
